**Purpose of Study:**  
The purpose of this research is to evaluate the usability of a machine learning-based system designed to predict depression severity from user responses by conducting a brief self reported-assessment.

**What Will I Do?**  
You will interact with an online depression screening system, complete a short depression assessment (PHQ-9 questionnaire), and provide feedback through structured questionnaires about your experience.

**Do I Have to Participate?**  
No. Your participation is entirely voluntary. You can withdraw at any time without providing a reason, and there will be no negative consequences.

**Are There Any Risks?**  
This research involves interacting with a system related to mental health and completing questionnaires about depressive symptoms. This might cause minor emotional discomfort. If you feel distressed at any stage, you can immediately stop participating. Support resources and guidance will be provided.

**Confidentiality and Data Protection:**  
No personal data is required or will be recorded by this study. All responses will be anonymized. The data gathered might be stored indefinitely and could be used for future ethically approved research and/or archived in the public interest. The identifiers used are collected *solely* to verify HW status; stored separately from survey responses; deleted after verification.

**Further Questions:**  
If you have any questions or require additional information, please contact

Participant Information and Consent Form

Purpose of Study:

The purpose of this research is to evaluate the usability of a machine learning-based system designed to predict depression severity from user responses by conducting a brief self reported-assessment.

What Will I Do?

You will interact with an online depression screening system, complete a short depression assessment (PHQ-9 questionnaire), and provide feedback through structured questionnaires about your experience.

Do I Have to Participate?

No. Your participation is entirely voluntary. You can withdraw at any time without providing a reason, and there will be no negative consequences.

Are There Any Risks?

This research involves interacting with a system related to mental health and completing questionnaires about depressive symptoms. This might cause minor emotional discomfort. If you feel distressed at any stage, you can immediately stop participating. Support resources and guidance will be provided.

Confidentiality and Data Protection:

No personal data is required or will be recorded by this study. All responses will be anonymized. The data gathered might be stored indefinitely and could be used for future ethically approved research and/or archived in the public interest.
