

National Health and Nutrition Examination Survey

2005-2006 Data Documentation, Codebook, and Frequencies

Mental Health - Depression Screener (DPQ_D)

Data File: DPQ_D.xpt

First Published: April 2008

Last Revised: NA

Component Description

These questions are from the Patient Health Questionnaire (PHQ), a version of the Prime-MD diagnostic instrument. They are a self-reported assessment based on the nine DSM-IV signs and symptoms for depression. Referred to as the Depression Screener Questionnaire (DPQ) in NHANES, the nine symptom questions are scored from "0" (not at all) to "3" (nearly every day). An additional follow-up question assesses the overall impairment of the depressive symptoms. Used most often in primary care settings, the PHQ has been shown to be a reliable and valid tool for the diagnosis of depression.

Eligible Sample

Mobile Examination Center (MEC) participants 12 years and older were eligible. No proxies were permitted to answer these questions. Only data from participants aged 18 years and older are included in this data file.

Interview Setting and Mode of Administration

These questions were asked by trained interviewers in Spanish or English using the Computer-Assisted Personal Interviewing (CAPI) system during the MEC private interview.

Quality Assurance & Quality Control

Approximately 5% of the interviews were recorded and reviewed for quality control purposes.

Data Processing and Editing

Edits were made to ensure the completeness, consistency, and analytic usefulness of the data.

Analytic Notes

Separate DPQ_D data files, according to age of participants, have been created to protect the confidentiality of youths. The DPQ_D data file for youths ages 12-17 is only available through the NCHS Research Data Center.
