

National Health and Nutrition Examination Survey

2007-2008 Data Documentation, Codebook, and Frequencies

Mental Health - Depression Screener (DPQ_E)

Data File: DPQ_E.xpt

First Published: October 2009

Last Revised: NA

Component Description

The Depression Screener (DPQ) questions are from the Patient Health Questionnaire, a version of the Prime-MD diagnostic instrument. They are a self-reported assessment of the past 2 weeks, based on nine DSM-IV signs and symptoms from depression. The nine symptom questions are scored from "0" (not at all) to "3" (nearly every day). Depression severity can be defined by several cut points from the total score that ranges from 0-27 (Kroenke 2001). A final follow-up question assesses the overall impairment of the depressive symptoms.

Eligible Sample

Mobile Examination Center (MEC) participants 12 years and older were eligible. No proxies were permitted to answer these questions. Only data from participants aged 18 years and older are included in this data file.

Interview Setting and Mode of Administration

These questions were asked by trained interviewers in Spanish or English using the Computer-Assisted Personal Interviewing (CAPI) system during the MEC private interview.

Quality Assurance & Quality Control

The CAPI system is programmed with built-in consistency checks to reduce data entry errors. CAPI also uses online help screens to assist interviewers in defining key terms used in the questionnaire.

Approximately 5% of the interviews were recorded and reviewed for quality control purposes.

Data Processing and Editing

Edits were made to ensure the completeness, consistency and analytic usefulness of the data.

Analytic Notes

Depression and depression severity have been defined using various methods in the scientific literature. Researchers may want to pay special attention to records with item non-response (questions that have missing, "don't know" or "refusal" responses) in deriving a score or severity measure.

MEC exam sample weights should be used for the analyses.

Please refer to the NHANES Analytic Guidelines and the on-line NHANES Tutorial for further details on the use of sample weights and other analytic issues. Both of these are available on the NHANES website.

A special use DPQ data file, for participants 12-17 years, is available through the NCHS Research Data Center (RDC).
