

National Health and Nutrition Examination Survey

2011-2012 Data Documentation, Codebook, and Frequencies

Mental Health - Depression Screener (DPQ_G)

Data File: DPQ_G.xpt

First Published: September 2013

Last Revised: NA

Component Description

Depression was measured using the Patient Health Questionnaire (PHQ-9), a nine-item screening instrument that asked questions about the frequency of symptoms of depression over the past 2 weeks. A final follow-up question assessed the overall impairment of the depressive symptoms. Response categories for the nine-item instrument "not at all," "several days," "more than half the days" and "nearly every day" were given a point ranging from 0 to 3.

Eligible Sample

Mobile Examination Center (MEC) participants 12 years and older were eligible. No proxies were permitted to answer these questions. Only data from participants aged 18 years and older are included in this data file.

Interview Setting and Mode of Administration

These questions were asked by trained interviewers in Spanish or English using the Computer-Assisted Personal Interviewing (CAPI) system during the MEC private interview.

Quality Assurance & Quality Control

The CAPI system is programmed with built-in consistency checks to reduce data entry errors.

Data Processing and Editing

Edits were made to ensure completeness, consistency, and analytic usefulness of the data.

Analytic Notes

A total score is based on the sum of the points in each item ranging from from 0 to 27. Major depression and depression severity can also be assessed.

The NHANES full sample 2-Year MEC Exam Weights (WTMEC2YR) should be used to analyze the 2011-2012.

Please refer to the [NHANES Analytic Guidelines](#) and the on-line [NHANES Tutorial](#) for further details on the use of sample weights and other analytic issues.
